

AHSEN NUR İLTER

GAME DEVELOPER · SOFTWARE ENGINEER

İstanbul, Manisa / Türkiye

ahsennurilter@gmail.com **LinkedIn** **GitHub** **Portfolio** · asennur.github.io

Game Developer with 4+ years of Unity and C# experience across mobile, VR, and PC game development, currently solo-developing Build&Boom, an online competitive party game, in Unreal Engine 5 with C++. Solo developer of DishDash, a restaurant simulation released on Steam after reaching 700+ wishlists before launch. Experienced in the full game development pipeline from prototyping and gameplay mechanics to debugging and deployment. Background in software engineering and mobile/desktop application development through academic and hands-on work. Adaptable across genres and production environments, with a strong focus on polished, player-centered experiences. Actively seeking a full-time position where I can contribute meaningfully and grow alongside the team.

SKILLS

- **Game Engines:** Unity, Unreal Engine 5, Godot (familiar)
- **Languages:** C#, C++ (Unreal Engine), Python, Java
- **Tools:** Git/GitHub, Visual Studio, Rider, Cursor, Zed, Blender, Photoshop/Illustrator, Figma, Jira, Trello/Notion, Slack/Discord, OBS
- **Platforms:** PC (Steam/Windows/macOS), Android, iOS, Meta Quest, WebGL

EXPERIENCE

Game Developer – Internship

August 2022 – September 2022

Code AI Tech

- Sole developer responsible for the full codebase of a VR collaboration simulation built in Unity.
- Implemented interactive objects and user interaction mechanics within a virtual office environment.
- Developed multiplayer and network systems to enable real-time user presence and interaction.
- Integrated 3D assets and audio elements to create an immersive virtual office experience.
- Designed and implemented in-VR UI elements to enhance usability and user flow.
- Debugged and iterated on core mechanics to ensure a smooth and stable user experience.

Game Developer – Freelancer

August 2023 – October 2023

ABC Planet

- Solely developed a children's mobile puzzle and coloring game in Unity, handling the full development pipeline independently.
- Designed and implemented core gameplay mechanics including painting and puzzle interactions tailored for young audiences.
- Integrated 2D assets and audio elements to create an engaging and child-friendly experience.
- Developed UI/UX elements optimized for touch-based mobile interaction.
- Optimized performance and conducted QA testing to ensure stable gameplay.
- Successfully shipped the game to Android and iOS platforms.

Game Developer – Internship

July 2024 – August 2024

VRPark

- Developed interactive mechanics and objects for an immersive VR ride experience on Meta Quest using Unity.
- Integrated 3D assets to enhance visual quality and overall user engagement within the VR environment.
- Optimized performance to ensure smooth and stable gameplay on Meta Quest hardware.
- Conducted R&D on emerging VR technologies and prepared research reports to inform the development team.
- Collaborated with a small team, taking direction from senior developers and delivering tasks efficiently.

PROJECTS

Build&Boom In development · Steam 2027

Unreal Engine 5 · C++ · PC (Steam)

Solo-developing a competitive party game where Builders race to raise a structure from a blueprint while Saboteurs try to bring it down. Three game modes from 1v1 to 3v3, online multiplayer with lobbies, quick match and friend invites, local split-screen, controller support and localization in 11 languages.

DishDash Released on Steam

Unity · C# · PC (Steam, Windows & macOS)

Solo-developed a restaurant simulation game, handling all aspects of development including gameplay mechanics, customer interaction systems, UI/UX, art, and sound. Leveraged AI tools to accelerate development. Reached 700+ wishlists before launch through an open playtest and released on Steam in October 2026.

Oyun Evi: Boyama ve Puzzle

Unity · Android, iOS

Developed a children's mobile game featuring painting and puzzle mechanics. Handled the full development pipeline solo, including gameplay, UI, asset integration, and deployment to Android and iOS.

Anadili 2

Unity · Android, iOS

Developed an educational mobile game for children focused on teaching the Azerbaijani language. Featured diverse mini-games including number recognition, family vocabulary, and animal education through engaging mechanics such as simulated phone calls and social media-style interactive videos. Managed the full development cycle independently.

EDUCATION

Digital Game Design *2020 – 2025*

Istanbul Bilgi University

Computer Engineering *2021 – 2026 (expected)*

Istanbul Bilgi University
